Are radioactive materials present in your laboratory?

Suspect the presence of radioactive material (RAM) contamination

Are any RAM stock vials open in the lab?

Have any RAM wastes been spilled or leaked onto work surfaces, floors, drawers, etc.

Has any RAM been pipetted in the laboratory?

Did you answer the phone, open a door or touch surfaces with gloves used to handle RAM?

Please Note: ONLY the laboratory RAM Authorized User, trained laboratory radiation workers or the Radiation Safety Officer (Authorized Personnel) can complete RAM spill cleanups in the laboratory. You may only attempt spill cleanups if you are fully aware of the hazards produced by the RAM isotope being used in the laboratory (see nuclide safety data sheet).
